

Additional Package Installation for MVS Execution on Windows

We will only need a 3270 emulator for the execution of MVS on Hercules. As mentioned earlier we have found that the Tom Brennan Vista 3270 emulator is the best available. The installation sequence for his package is:

1. Double click the file name: **vista126...** to begin installation.
2. Click "**Next**" to start the wizard.
3. Click "**Next**" to accept the file locations.
4. Click "**Next**" to accept the file folder.
5. Click "**Install**" to install the product.
6. Click "**Finish**" to complete the installation.
7. After you have booted Hercules, but before you IPL MVS, you need to start at least four 3270 sessions. To use the emulator click Start > All Programs > VistaTN3270 > Vista3270
8. Enter "**3270**" for the IP port in the Start a new session window. Then click "**Connect**". Repeat this three more times then IPL MVS.
